

ABSTRACT OF THE DISCLOSURE

A truck cap lifting assembly includes a first elongated member and a
5 second elongated member each having a first end, a second end, a top side,
a bottom side, and a pair of lateral side edges. A lifting assembly is
attached to each of the first and second elongated members such that the
first and second elongated members may be selectively lifted or lowered.
The lifting assembly supports the first and second elongated members such
10 that the elongated members are spaced from each other and are orientated
parallel to each other. Wherein a truck cap may be positioned on the
elongated members and selectively raised or lowered by the lifting
assembly.
